Welcome to...

The Seekers Rest. An E-magazine & website for the Banana Nebula Expedition player group & our own Nebula Discoveries LLC (NBLC) Faction & squadron.

Here you can find a **NEWS ARCHIVE** of our exploits, from birth to present day. A **MISSIONS** section, which describes our ongoing activities in the area of exploration. An **NBLC FACTION** section which attempts to explain who, what and why we love to snuggle. an **E-MAG ARCHIVE** and a **CMDR ALBUMS** section.

Feedback welcome via Discord @Admin.

AN ARCHIVE...

Of the Banana Nebula Expedition, with the latest news first.

The news archive goes back to FEB 3306 and contains information about events that have unfolded over time, covering discoveries that led to the formation of the first expedition and all of the underatkings that have gone on since.

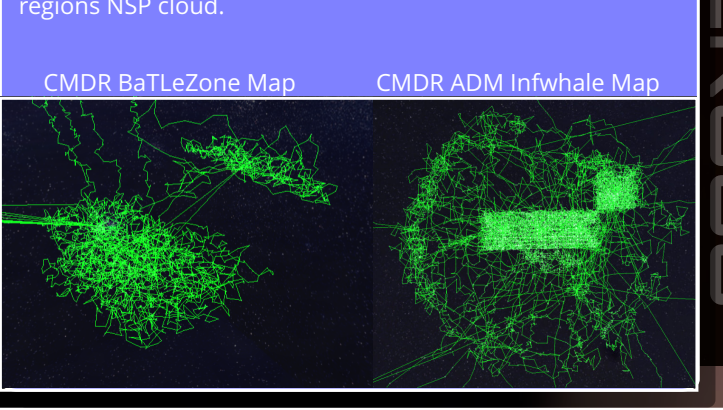
NOTE! Buttons like those opposite provide links to data, forms, discord, reddit posts and CMDR videos.

OCT 3309

JUN - OCT 3309

The BNE Site NSP count broke 11,500 on Oct 1st where Cube 4 mapping is almost complete. It's been a long slog, but with any luck, just 1 more cube remains to complete the first cross-section of BNE site system searches.
CMDR BaTLeZone has also continued his lonely research out at the D sites, raising the number of NSP by a few hundred and potentially finding the upper and lower limits of the regions NSP cloud.

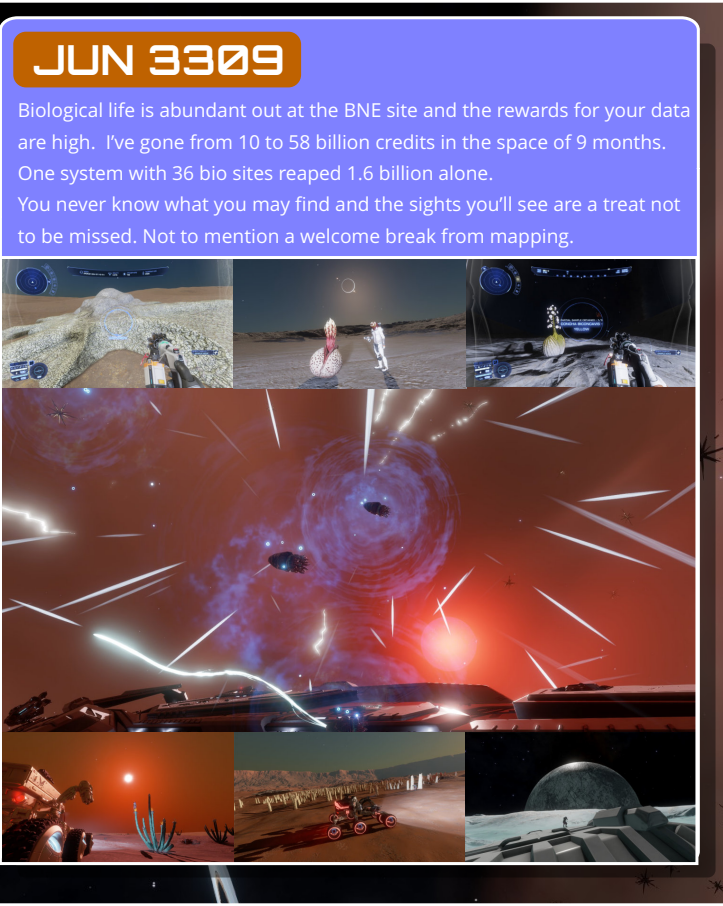
CMDR BaTLeZone Map CMDR ADM Infwhale Map



JUN 3309

JUN 3309

Biological life is abundant out at the BNE site and the rewards for your data are high. I've gone from 10 to 58 billion credits in the space of 9 months. One system with 36 bio sites reaped 1.6 billion alone.
You never know what you may find and the sights you'll see are a treat not to be missed. Not to mention a welcome break from mapping.

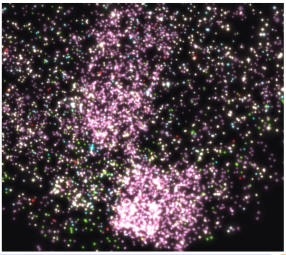


JAN 3309

HAPPY NEW YEAR 3309

It is that time of year again. Over the last 4 months things have slowed to a crawl at the BNE. We are few, but the few that remain are dedicated.
So Happy New year and best wishes to all CMDR's everywhere.

OP ED - ADM Infwhale.
Back home, the powers that be, the clandestine groups that shroud themselves with cloaks of anonimity and push unproven narratives via their MSM propoganda tools. They, once again have poked the hive. This time their actions have finally provoked the Thargoids to take steps for self-preservation. In turn, this has roused the smooth-brained to act as their minions, sharpening their sticks and throwing their bodies not at the true enemy within, but at the 'alien'. For those of us that set ourselves to higher standards, in life, as in-game. The ones who want to learn, share and discover. We that remain out in the black. We will retain hope that cooler heads will prevail and inquisitive minds may find a way to route the enemy within.



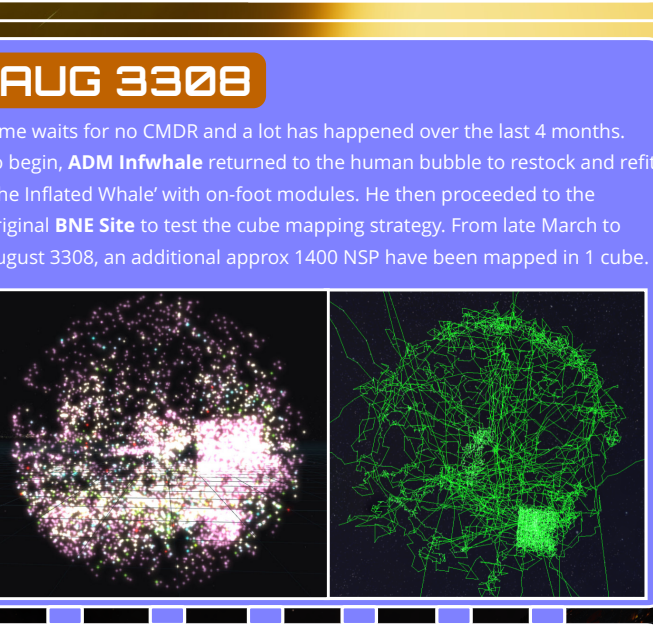
As to the latest news. **ADM Infwhale** continues to cube-map the BNE Site. Now on the 3rd cube (200x200x200ly) he has raised the total number of known NSP in the area to 9600. That's 1300 new NSP since August. Efforts continue and updates will be posted on the missions pages & BNE discord as usual.

In related news, CMDR **V Clara**, a Guardian related investigator and content creator has posted their latest mission update 7 of **Guardian Chronicles**. Working in cooperation with Canonn, this is a series that is well worth a watch if you'd like to learn about the Guardian sites and what has been discovered. This episode has a focus on sites at NGC 3199. The same location as the BNE site.

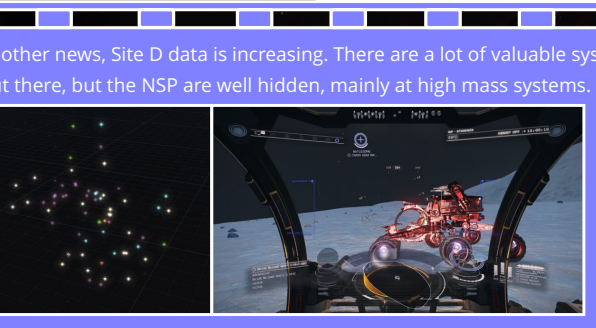
AUG 3308

AUG 3308

Time waits for no CMDR and a lot has happened over the last 4 months. To begin, **ADM Infwhale** returned to the human bubble to restock and refit 'The Inflated Whale' with on-foot modules. He then proceeded to the original **BNE Site** to test the cube mapping strategy. From late March to August 3308, an additional approx 1400 NSP have been mapped in 1 cube.

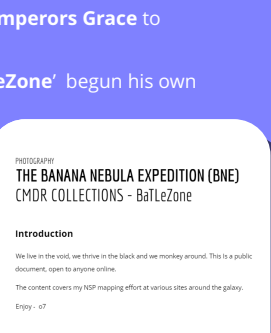


In other news, Site D data is increasing. There are a lot of valuable systems out there, but the NSP are well hidden, mainly at high mass systems.



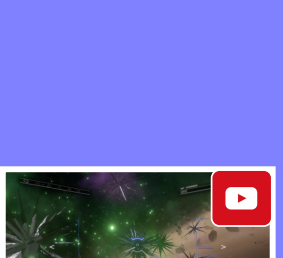
A **new bug** - unscanable crystals has been found at the site along with strange looking crystal forms compared to those we know.
We also had a small celebration of our second anniversary as a Player Group, with some shenanigans at the site. Note. If you're going to go out to this site. Expect earnings of over half a billion (if you stop, FSS scan and map the high value planets) along the way from the human bubble.
In July, a worthy BNE hero, '**Raf Von Thorn**' returned. The seasoned CMDR who started our discord and organised the first BNE expedition. Made a return to the discord with plans to do some ED activities in the future. 'Welcome back!' Should you rename **The Emperors Grace** to **Mary Celeste**.
Finally, our most dedicated Admiral, '**BaTLeZone**' begun his own CMDR Photo Album.

See the link 'PHOTOGRAPHY OF THE BANANA NEBULA EXPEDITION (BNE) CMDR COLLECTIONS in the CMDR Album section. Note - This album only contains EDH photography at this time.
o7 all and fly safe!



THE BANANA NEBULA EXPEDITION (BNE)
CMDR COLLECTIONS - BaTLeZone

Introduction

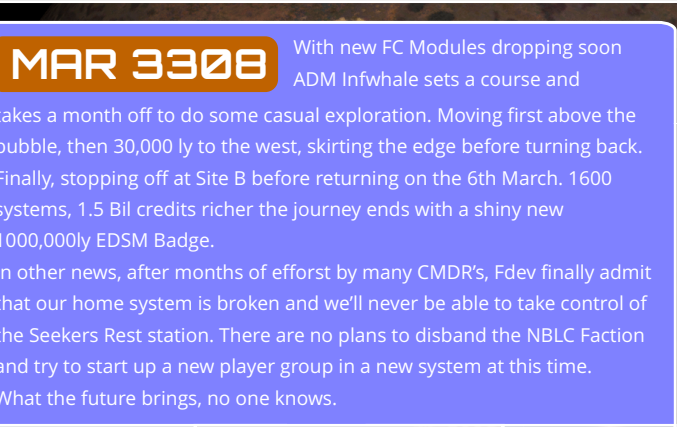


Mary Celeste

MAR 3308

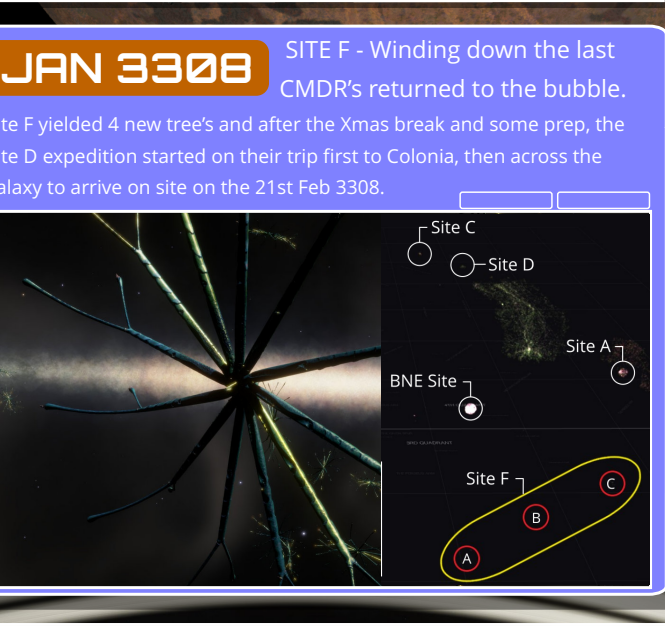
MAR 3308

With new FC Modules dropping soon ADM Infwhale sets a course and takes a month off to do some casual exploration. Moving first above the bubble, then 30,000 ly to the west, skirting the edge before turning back. Finally, stopping off at Site B before returning on the 6th March. 1600 systems, 1.5 Bil credits richer the journey ends with a shiny new 1000,000ly EDSM Badge.
In other news, after months of effort by many CMDR's, Fdev finally admit that our home system is broken and we'll never be able to take control of the Seekers Rest station. There are no plans to disband the NBLC Faction and try to start up a new player group in a new system at this time.
What the future brings, no one knows.



JAN 3308

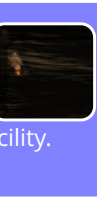
SITE F - Winding down the last CMDR's returned to the bubble.
Site F yielded 4 new tree's and after the Xmas break and some prep, the Site D expedition started on their trip first to Colonia, then across the galaxy to arrive on site on the 21st Feb 3308.



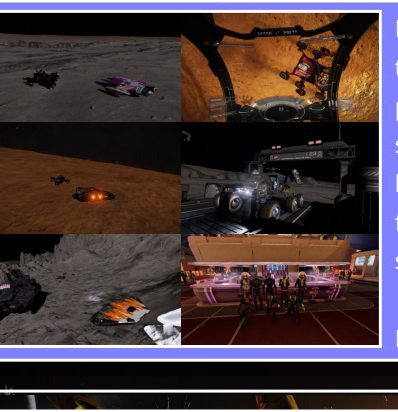
DEC 3307

NOV & DEC 3307

All sites returned to the human bubble for a break from mission activities. XMAS activities included SRV races at Temple Hub and suicidewinder plus SRV demolitions at the Holloway bio-sci research facility.



TEMPLE HUB



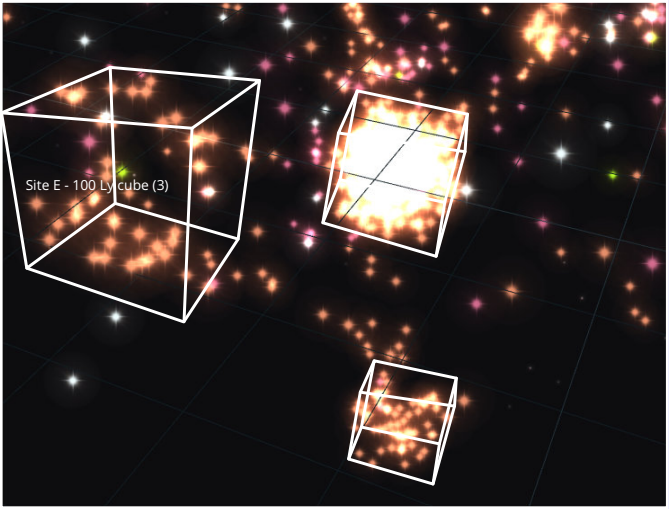
Before the SRV derby the in-game xmas present hunt delivered several new items, a little extra cash, two free ship hulls and some free ARX.

HAPPY NEW YEAR!

OCT 3307

OCT 3307

Continued exploration of Site E reveals more NSP Sites and spherical dimensions growing to almost equal measurements as predicted.
The 3rd 1000,000ly cube mapping is proceeding slowly.



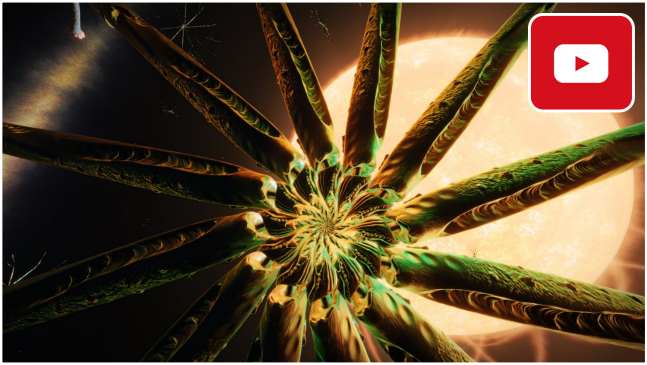
Continued efforts on the part of the Site F team reveal new data for the Canonn galaxy mapping project. Under tough conditions hope yet remains for some new finds.

01-08-3307
Site F-B
21-08-3307
30-09-3307

AUG 3307

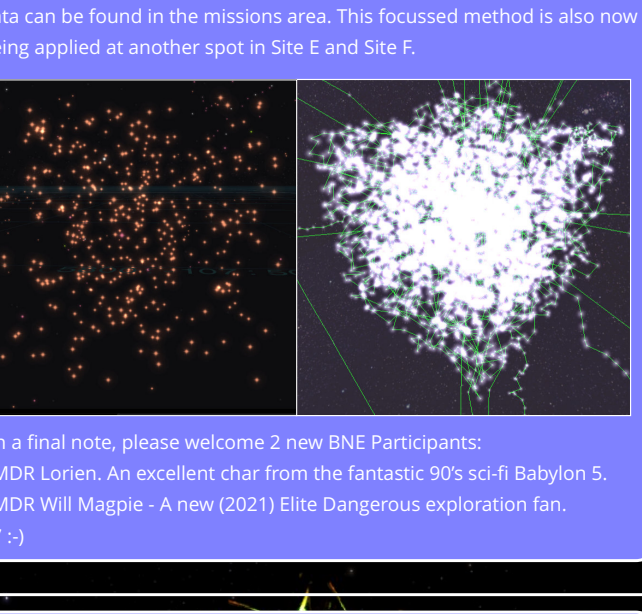
AUG 3307

Another busy month at the BNE:
Site F mapping started so the new Site F area has been added to the website missions page. 2 FC's are now on site and The Makroprosopos (Admiral THEpREDEITOR) has been comissioned to assist, departing on the 20th. Data is now being gathered placing Gyre Trees and Pods on the menu.



While the site has been divided into 3 areas (A, B and C) the density of stars is a little varied. New mapping methods are under development to aid those that might choose to help with mapping. It's nice to see something other than molluscs.

Summer Holidays have left us with a skeleton crew, but ADM Infwhale; self isolating, has filled the time with the 1,000,000 cubic light year mapping project at the centre of Site E. Now completed the area held 3645 star systems. Over 1000 NSP systems have now been identified. Full data can be found in the missions area. This focussed method is also now being applied at another spot in Site E and Site F.



On a final note, please welcome 2 new BNE Participants:
CMDR Lorien. An excellent char from the fantastic 90's sci-fi Babylon 5.
CMDR Will Magpie - A new (2021) Elite Dangerous exploration fan.
o7 :-)

JULY 3307

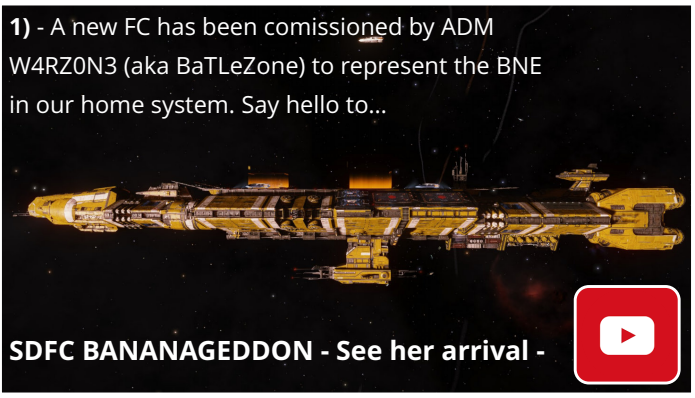
JULY 3307

The BNE marked its 1st anniversary on July 11th 2021.
It has been an excilerating year to say the least. The ups and downs of life have had an effect on all of us, but our love of the game and community have kept us going thus far.
The Fleet Command wish to thank you all, past and present for your hard work and dedication to the cause.

Elite Dangerous 3.0.1.00 EDH (Beta 1)

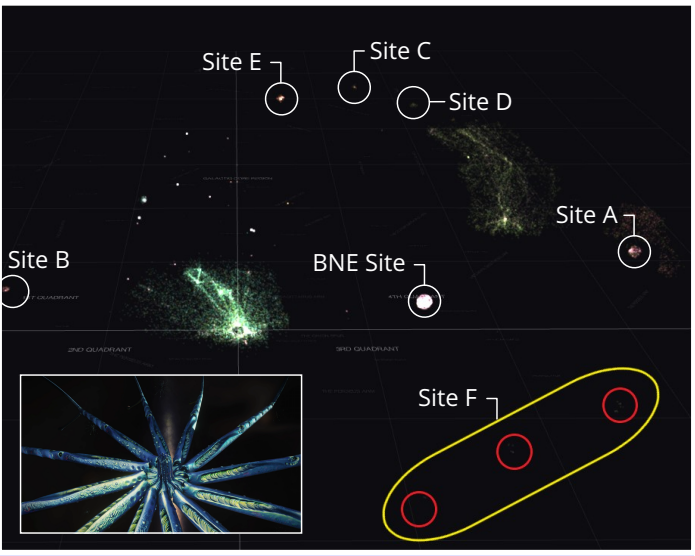
In honour of this occasion, several projects have been completed:

1) - A new FC has been comissioned by ADM W4RZ0N3 (aka BaTLeZone) to represent the BNE in our home system. Say hello to...



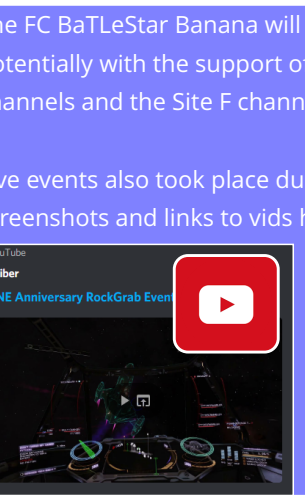
SDFC BANANAGEDDON - See her arrival -

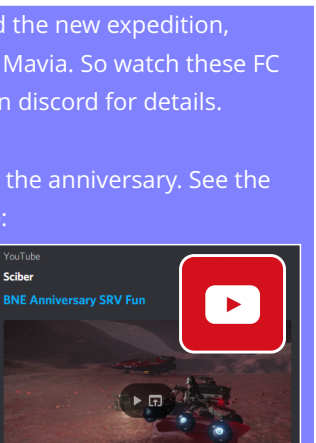
2) - A new edition of the BNE e-Magazine was made available. See the e-magazine archive. But why download a pdf when you can now -
3) - Access our new website, now online at
bananananebulaexpedition.com
bananananebulaexpedition.online
4) - Finally, before live events took place, ADM BaTLeZone announced planning stages for the next Site F expedition.



The FC BaTLeStar Banana will lead the new expedition, potentially with the support of FC Mavia. So watch these FC channels and the Site F channel on discord for details.

Live events also took place during the anniversary. See the screenshots and links to vids here:





JUNE 3307
CMDR OF THE MONTH!

JUN 3307

A busy month even considering the Odyssey effect:
CMDR Scopelx takes it upon himself to go and scout Site C. Definately a worthy CMDR of the month award there.
ADM Nick Nicholson does the insane - 2 x 50,000 ly trips in opposite directions at the same time. One carrying a hull full of Tritium and with a tiny jump range to help resupply The Inflated Whale at Site E.

And finally, we join forces with the TSCG - The Stellar Cartographers Guild.
"We are a guild of explorers who are united in the goal of expanding our knowledge and understanding of our galaxy. As we explore deeper into the black, each day brings new discovery. We map the stars and expand our horizons. We are a relaxed, no pressure group who travel at our own pace. We are not concerned with title, experience, wealth or the BGS".

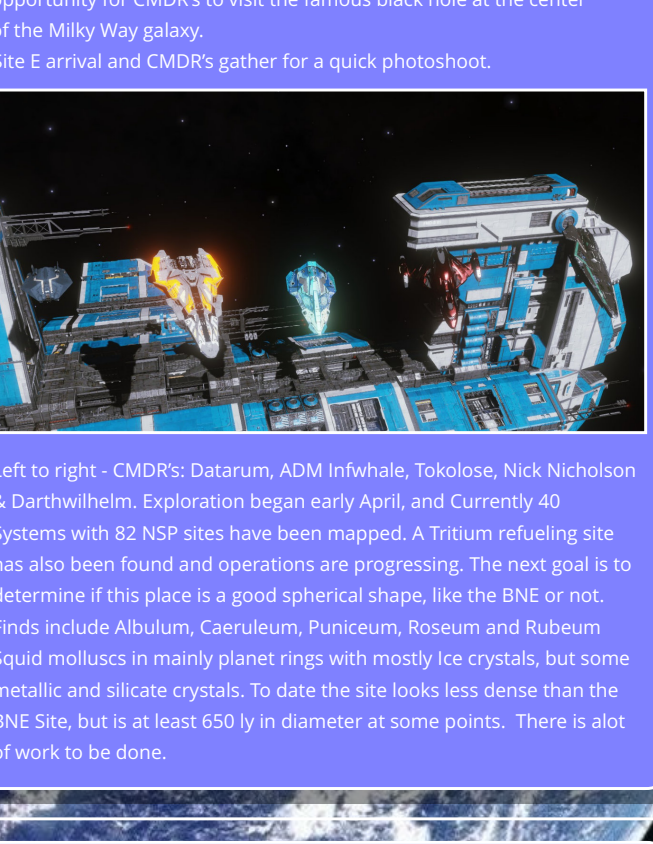
PS - The first CMDR Photo Album has also been created. See the link in the CMDR ALBUMS page.

APRIL 3307

APR 3307

The Site E Expansion mission begins...
7 CMDR's, 1 FC and 50,000ly to go. What could go wrong?

Site E Expansion mission journal...
First stopover reached safely. ADM Infwhale and Admiral Nick Nicholson took a brief trip to check out a possible Site F location.
Check the video to see what was found and check the missions page for more details.
Second stop over at Sag A, the half way point and an opportunity for CMDR's to visit the famous black hole at the center of the Milky Way galaxy.
Site E arrival and CMDR's gather for a quick photoshoot.



Left to right - CMDR's: Datarum, ADM Infwhale, Tokolose, Nick Nicholson & Darthwilhelm. Exploration began early April, and Currently 40 Systems with 82 NSP sites have been mapped. A Tritium refueling site has also been found and operations are progressing. The next goal is to determine if this place is a good spherical shape, like the BNE or not. Finds include Albulum, Caeruleum, Puniceum, Roseum and Rubeum Squid molluscs in mainly planet rings with mostly Ice crystals, but some metallic and silicate crystals. To date the site looks less dense than the BNE Site, but is at least 650 ly in diameter at some points. There is alot of work to be done.

MAY 3307

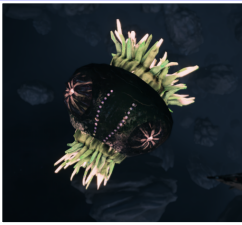
MAY 3307

The BNE Discord begins to shrink after Odyssey drops on PC.
Still, for the dedicated explorers amongst us, the graphics improvements are a welcome upgrade, even with the flaws & needing to travel thousands of lightyears to pick-up suits.

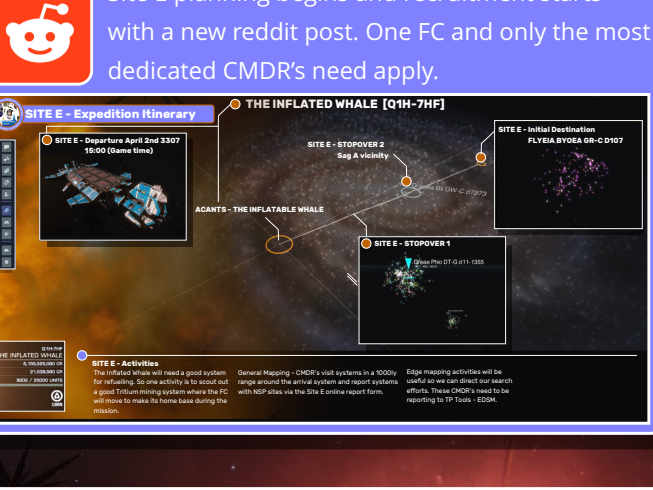
MARCH 3307
CMDR OF THE MONTH!

MAR 3307

The Site B expansion mission arrives on site and Site D is briefly scouted at the same time.
The NBLC Faction is formed and begins ops to take control of our new home system and station, 'The Seekers Rest'. An apt name if ever there was one.
Also at Site B, CMDR THEpREDEITOR makes a NEW discovery as shown.
The Flavum Torus mollusc. Apart from this, the CMDR has devised a unique method of mapping to aid the mission participants divy up systems and coordinate their search efforts. O7 CMDR!



Site E planning begins and recruitment starts with a new reddit post. One FC and only the most dedicated CMDR's need apply.

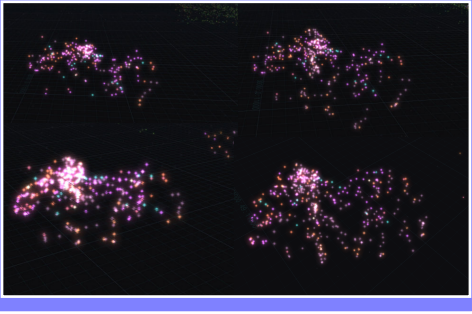


FEBRUARY 3307
CMDR's OF THE MONTH!

FEB 3307

The BNE grows its ambitions and decides to expand ops to new NSP sites around the Galaxy. Sites A, B, C, D and E are chosen for further investigation. Site A initial exploration takes place supported by ADM Nick Nicholson with FC Mavia.

Site B launches soon afterwards under the command of ADM BaTLeZone on the Fleet Carrier BaTLeStar Banana.

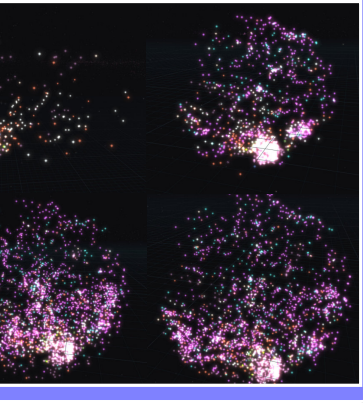


JANUARY 3307

JAN 3307

BNE Site data grows in the Canonn galaxy map. Data now covers 3327 star systems with 6193 NSP sites in a sphereical bubble, 1180 x 1159 x 1180ly.

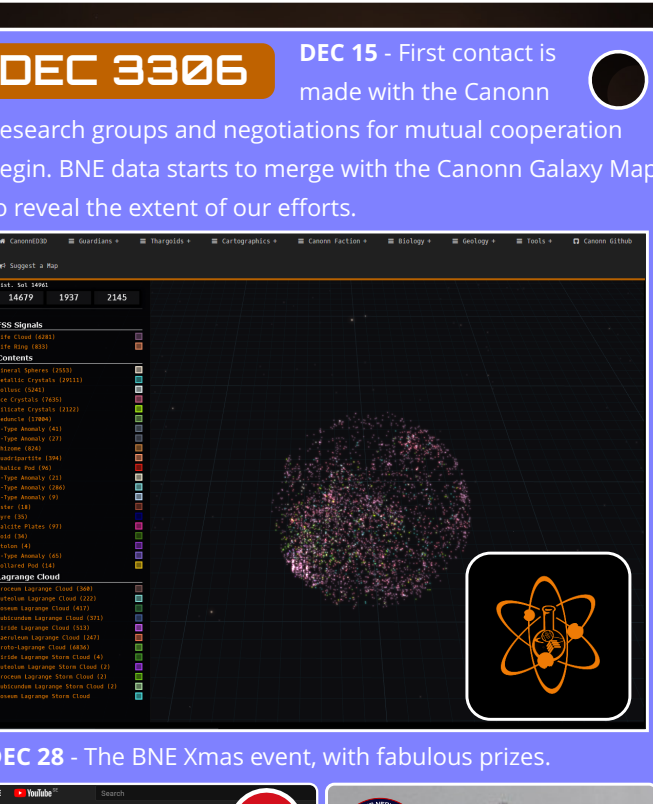
STATS:
3877 Mollusc sites.
1082 Lagrange clouds.
2950 Ice crystal sites.
1644 Metallic crystal sites.
603 Silicate crystal sites.
104 Solid Mineral Sphere sites.
Plus Guardian sites.
There is lots of work still to be done. o7



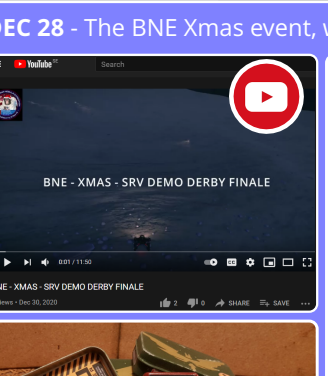
DECEMBER 3306
CMDR OF THE MONTH!

DEC 3306

DEC 15 - First contact is made with the Canonn
Research groups and negotiations for mutual cooperation begin. BNE data starts to merge with the Canonn Galaxy Map to reveal the extent of our efforts.



DEC 28 - The BNE Xmas event, with fabulous prizes.



NOVEMBER 3306
CMDR OF THE MONTH!

NOV 3306

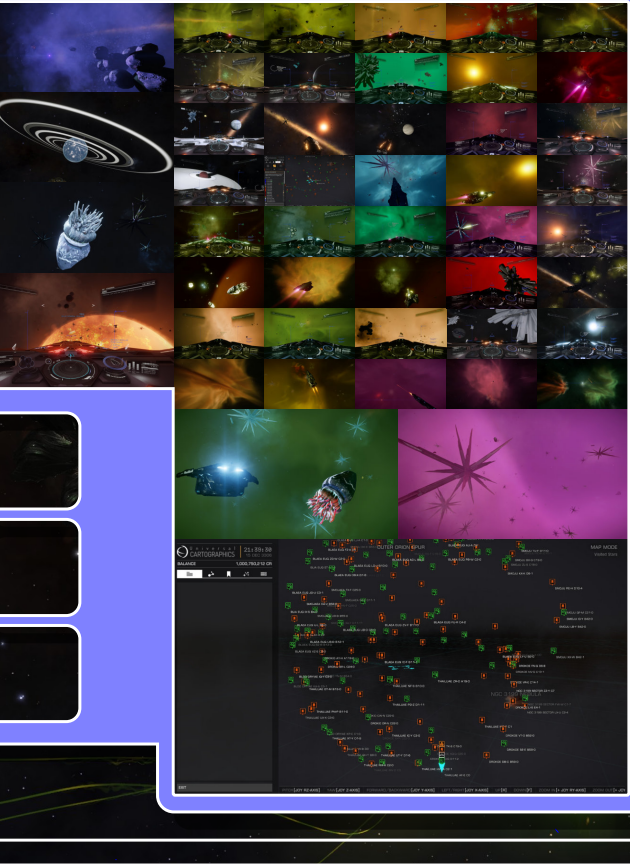
Sagittarius Eye - The prime Elite Dangerous Magazine - Issue 30 is released with a featured article about the BNE. Thanks go to ADM Raf Von Thorn, Mack Winston and the awesome team at Sagittarius Eye.

Sagittarius Eye - The Elite Dangerous Magazine - Issue 30
Podcast released 04/11/20
Google Play Podcasts

OCTOBER 3306

OCT 3306

The 9th Fleet Carrier joins the BNE and takes position for operations. Thanks to the hard work of all involved, updates show that 4,500 NSP sites have now been discovered.



SEPTEMBER 3306

SEP 3306

The intrepid journalists of Sagittarius Eye interview ADM Infwhale, the site founder & Raf Von Thorn, the BNE Fleet Admiral.
The first NSP anomalies are reported. Moving NSP sites, that can't be entered and that pass through planets? A strange Lagrange cloud is also discovered, which disipates upon approach (DROKOE HI-Q D6-7).

To round off a busy month. The local DSSA FC joins the discord to offer support for our CMDR's. Welcome DSSA Kraut and Rudi Raumkraut. Nebula Discoveries LLC Squadrons are formed on XBOX & PS4 and on SEP 19th, the first BNE player event day takes place.

AUGUST 3306
CMDR OF THE MONTH!

AUG 3306

AUG 8 - The BNE YT Teaser goes live on Inf Whale channel
AUG 12 - BNE ED Wiki page is live
AUG 17 - BNE on D2EA YT.

HELLO DAVE
DOWN TO EARTH ASTRONOMY
162

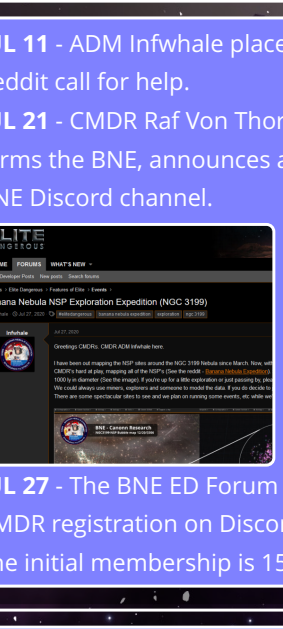
AUG 20 - The PC, NBLC Squadron is established. **AUG 22** - 5 FC's have now joined the BNE.
AUG 24 - We reach 100 CMDR's.

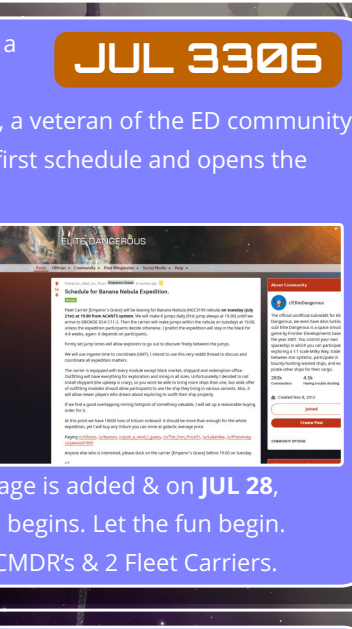
OUTER ORION SPUR

JULY 3306

JUL 3306

JUL 11 - ADM Infwhale places a Reddit call for help.
JUL 21 - CMDR Raf Von Thorn, a veteran of the ED community forms the BNE, announces a first schedule and opens the BNE Discord channel.





JUL 27 - The BNE ED Forum page is added & on **JUL 28**, CMDR registration on Discord begins. Let the fun begin.
The initial membership is 15 CMDR's & 2 Fleet Carriers.

MAY 3306

MAY - JUN 3306

The NSP sites appear with almost every new jump.
Mapping continues and by the end of June 3306, approx 150 systems with NSP have been identified and explored.

APRIL 3306

APR 3306

Beta tests and Fleet Carriers are released. ADM Infwhale takes a quick detour to the Eskimo nebula and performs some exploration at the upper edge of the galaxy before piloting **The Inflated Whale**'back to NGC 3199.

STATUS AND STATISTICS

STATUS.

ONGOING - Admiral ADM Infwhale - The Inflated Whale. A DSSA FC is nearby at the NGC 3199 Nebula. Only ADM Infwhale is performing mapping activites at this time.

STATS:

NSP mapping began in March 3306. Activities paused in March 3307 and resumed in May 3308. Results of NSP mapping to date can be viewed in the excel google sheet. This can be summerized as follows:
NEW Discoveries - 3 (Likely Game Bugs)
Known Systems containing NSP sites - 6,226
Known NSP Sites - 11,519
Known Life - Bullet molluscs. All crystal types. All langrange clouds except Storm types and all known Mineral Sphere types.

FINAL SUPPORT REPLY FEB 25 2022:
Greetings Commander!
My apologies for the extensive delay in response; this has been investigated by our internal team in the interest of seeing what's possible but I'm sorry to report back that the case remains, given the location and state I'm afraid you won't find that the required missions are generated.

My apologies I couldn't provide better news. If we can be of any other assistance, or answer any other questions please get back in touch and the team will assist where able.

Kind regards,
Support Agent Viking
